

Images in Email

You can now insert images in the email editor on AustinQuakers.org and Scym.org.

Getting Ready

You can create an image and upload it to the site using the File Manager or find an existing image in the File Manager. Then use File Manager to get the URL you will use in the email message.

WARNING: Prepare the image and get the URL before you start your email editor.

You may lose content if switching between the editor and the file manager.

You can create an image and upload it to the site using the File Manager or find an existing image in the file manager.

Image Properties

You can create a new image or edit an existing image to conform to these properties:

Format:

- **JPG format** JPG (or JPEG) is a good choice for photos and colorful images. It uses lossy compression, which reduces the file size while still maintaining good quality.
- **GIF format** GIFs are good for simple graphics, animations, and images with a few colors.
- **PNG format** PNGs keep all the details of an image without losing any quality. Use PNG for graphics with transparency

Dimensions:

- **Banners:** Width should match the email body, typically between **600px and 900px**, with a height of **300px to 500px**.
- **First-fold images** (e.g., e-commerce visuals): Width between **600px and 900px**, height varies based on design.
- **Logos or headshots:** Standard size is around **100px**, adjustable as needed.
- **Icons:** Typically **50px to 100px**, depending on the shape.

File size:

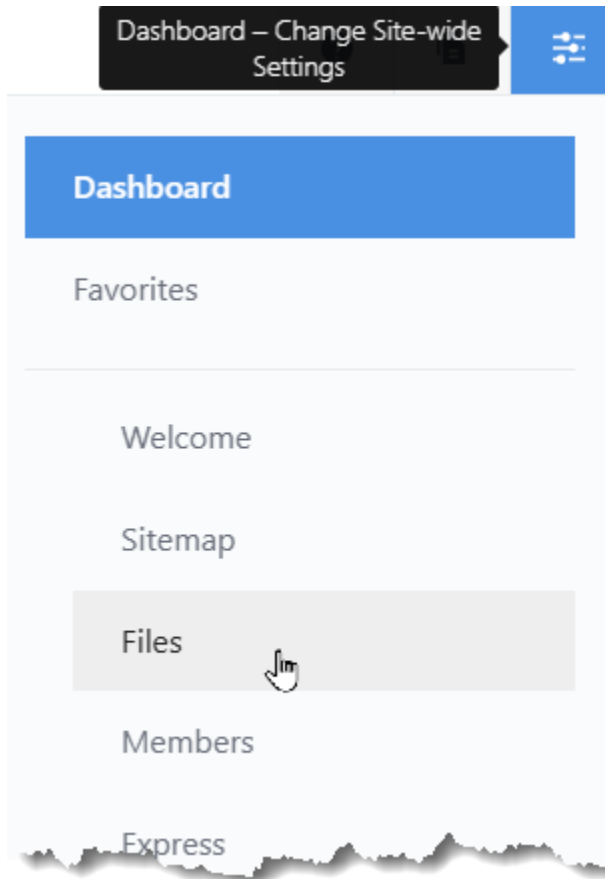

Keep image file sizes under 100KB

To reduce the fatness, you can use an only image compression utility:

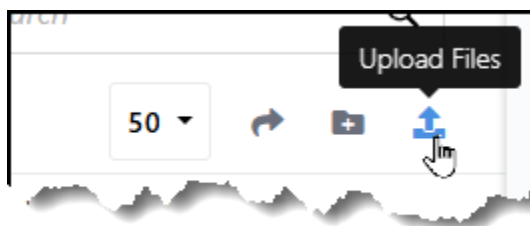

- <https://www.freeconvert.com/image-compressor>
- <https://imageresizer.com/image-compressor>

Upload the image and get the image URL

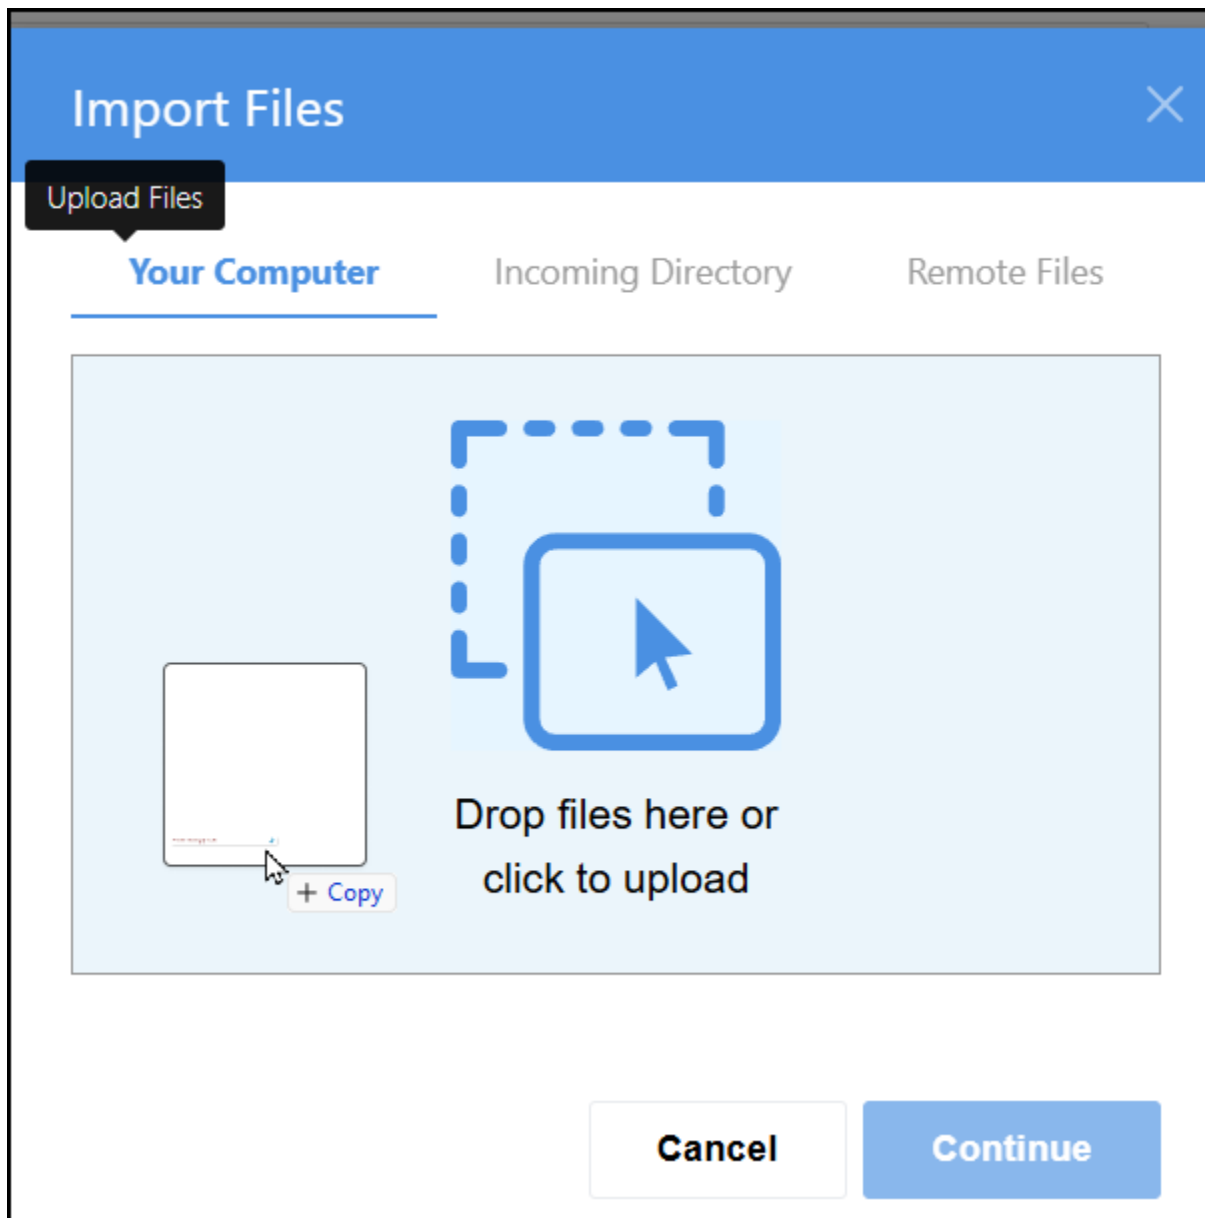

Browse to the website, sign in as an administrator, click the dashboard icon and open the File Manager:

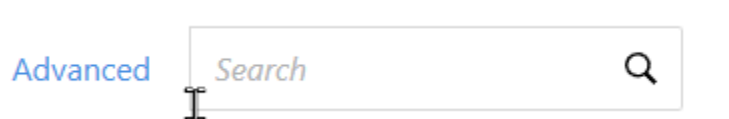

To upload a file. Click the upload button.

Drag and drop your file here:

If your file is already uploaded and listed in the File Manager, you can use the search feature in File Manager to find it:

When you see your file listed in the File Manager, click on it.

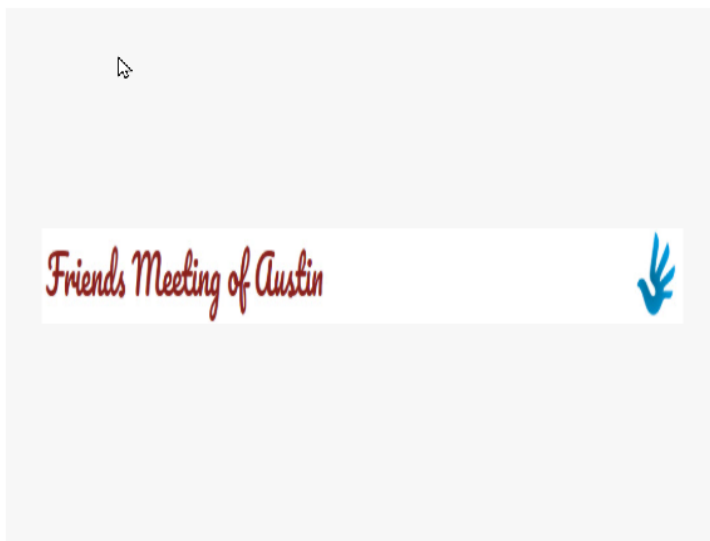

File Manager

☐	Name	Type
☐	 fma-banner.jpg	JPG Image

This will take you to a page with image details:

fma-banner.jpg

Attributes

Title **fma-banner.jpg**

Description **No description**

Tags **No tags**

Size **20.21 KB (20698 bytes)**

Width **987**

Height **69**

Duration **None**

Below this, look for “Direct URL” and copy the value. You should paste this into a text editor, like notepad. To use later.

Direct URL

<https://www.austinquakers.org/application/files/7117/4464/5919/fma-banner.jpg>

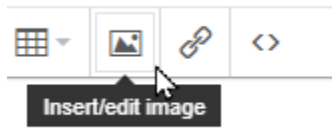

If you need to embed an image directly in HTML, use this URL.

Now you are ready to compose and send your message.

Adding an Image to Your Email Message

Open your email page on the website and enter the content.

To insert an image, click the image button on the editor toolbar.

In the “Insert/Edit image” dialog box:

1. Paste your URL in “Source”
2. Enter an image description (very important for accessibility)
3. In Dimensions, enter a percentage value as width and “auto” in the height field. If, as in this example, it is a banner image use “100%” if you want to reduce the size, use a smaller percentage.
4. Uncheck “Constrain proportions.”

A screenshot of the 'Insert/edit image' dialog box. It has a title bar with the text 'Insert/edit image' and a close button. The dialog contains three main sections: 'Source' with a text input field containing 'https://www.austinquakers.org/application/files/7117', 'Image description' with a text input field containing 'Friends Meeting of Austin', and 'Dimensions' with two input fields for '100%' and 'x auto', and an unchecked checkbox labeled 'Constrain proportions'. At the bottom right are 'Ok' and 'Cancel' buttons.

Click Ok.

Test

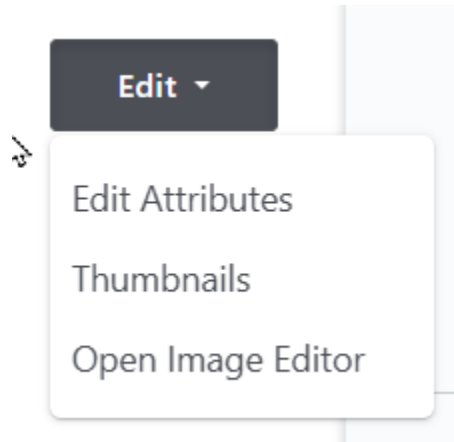

Your image should scale to different screen sizes, but you might see distortion. Send yourself a test message and read it on your computer and your phone. If there is distortion it might be fixed by reducing or enlarging the size of the original image. You can do that in the File Manager without having to reload the file or resend the email.

If you have not sent the message out yet, click the code button <> and copy the html text to an editor, so you can restore later if you lose it.

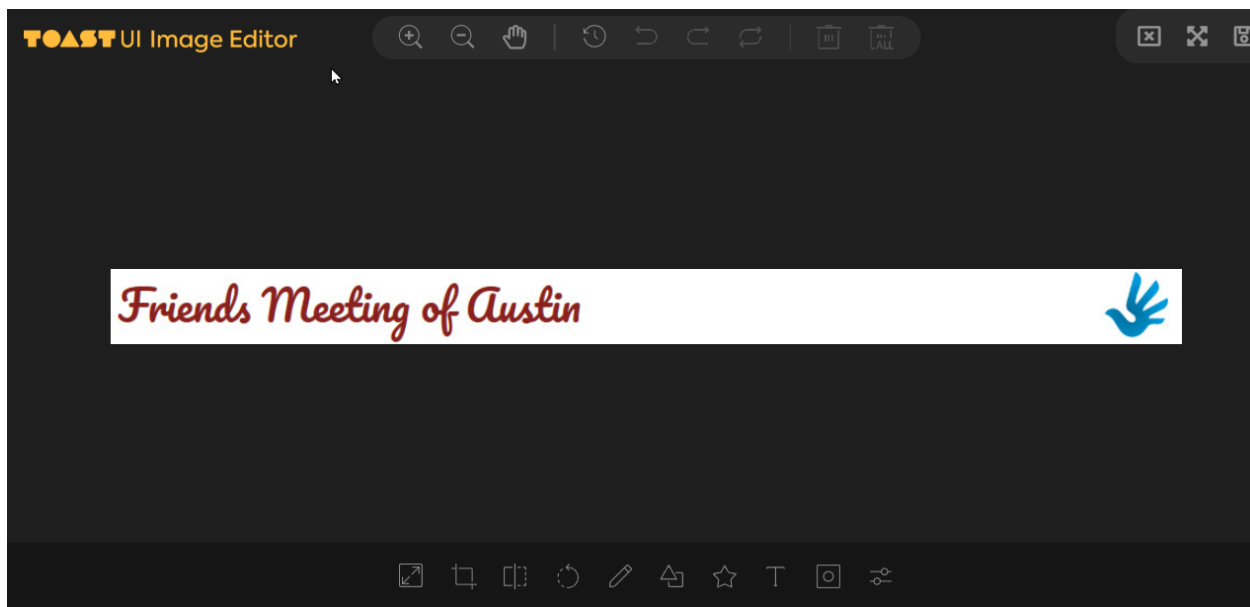

Now, open the File Manager, find your file and click on it as described previously.

If you want to make some simple edits, you can select “Open Image Editor” from the drop-down menu on the “Edit” button.

Find your file in the file manager

This will bring your image up in an image editor.

You can use this to resize your image.
